

## Most commonly encountered Run Control Parameters

ADDTAB add into existing tables on ITF

ADDWRT add to end of existing IDF

BRA accept blank input lines of data

BRP punch blank lines of data

C[(s)]=... input data files names (on stream s)

CEPX steps to be executed

CSV2[R][M][I]... produces a Tables CSV file for spreadsheets

EXPORT Automates exporting of data

\*header header for LISTING file (first line only)

IC= ignore input data records beginning with string

IDF=... intermediate data file(s) to be input to this set-up

INFO display all job process information at screen

INTED redirect Report file output to screen

INTRPT use interactive print facilities

INX generate an Index file

ITF=... intermediate tables file to be input to this set-up

MAXIDF= limit number of IDF records to be read

MINSHOW= limit minimum number of data records to be seen

NOADDINI do not add this set-up to the recently accessed list

NODIS redirect interactive output to Report file

NOLST suppress listing of set-up in Listing file

NOLSUM suppress list summary in Report file

NOPRINTF do not print the tables from ITF

NORPT suppress all output to Report file

NOTAB suppress all output to Tables file

O= prefix for all output files

OLDNAMES use output file names as older versions

OLDWQ apply quantity weight to unweighted as older versions

PPx=n preset PP index x to value n

PPONLY pre-process only, no checking of syntax

P[(s)]=... output punch file name (on stream s)

TERSE display minimum job process info at screen

TIDY do not create kfile internal files

UNDEFINED preset values to U instead of 0

UNICODE output some files as Unicode text

XNOTTEMP variables beginning X are not temporary

XREF generate cross-reference in Listing file

XTABML output the tables to an XML file
